

Stop an intruder yourself? We know it's difficult to imagine, but that's why we exist.

We believe you should hold the power to protect what matters. Unlike anything else on the market, the Inferno emits an unbearable frequency designed to trigger a flight response, successfully forcing intruders from your property.

Inferno sound barriers are a unique security product designed to either integrate into existing alarms, or have options for standalone use.

-  Easily upgrade your alarm system
-  Effectively force intruders to leave
-  A sound investment in your security
-  Stop intruders in seconds

COMMERCIAL ALARMS

We see countless commercial customers who are left frustrated by their alarm system's inability to stop intruders.

The problem is, your current alarm system was not designed to deter intruders. Once an intruder has committed to invading your property, an alarm system becomes ineffective and solely acts as an alerting system.

The Inferno is designed to drastically boost the effectiveness of your current alarm system, and acts as a simple bolt-on to your alarm capability.

Benefits

- An easy bolt-on installation to any brand of alarm system
- Removes intruders from your property immediately
- Immediately boost the effectiveness of your current alarm system

STANDALONE SYSTEM

Garages, sheds and vans are targets for burglars and opportunistic criminals - so whether you're storing your prized motocross bike, a classic car that brightens your weekend, or the tools that keep your business running - you want to be sure that they are protected.

We believe that you ought to be able to protect any part of your property, whether it has an alarm system or not. Designed for an easy installation, the standalone system can be set up in less than thirty minutes. You will be protected by a sound barrier in no time at all.

Benefits

- A simple, no wiring self installation with built in sensor
- Long range remote control arm and disarm with simple sound prompt
- Battery backup for power loss and intruder sabotage or tampering

PLUG 'N' PLAY ALARM & INFERNO

If you own an outbuilding, storage container or isolated commercial building then you know the devastation and heartache that can come from discovering you have been broken in to overnight.

We serve a community that continues to struggle to protect what they own from criminals. That's we designed a plug 'n' play system that leverages a smartphone notifications, along with the intruder-stopping power of the Inferno.

Break the heartache and worry by protecting your livelihood with multiple layers of defence.

Benefits

- Our world SIM provides great cellular signal for 247/365 instant push notifications
- Integrated vibration, PIR and magnetic sensors for low false positives
- Generates Inferno's patented wall of sound to instantly remove intruders

CUSTOM APPLICATIONS

If you are developing a security product with a sound protection element, or looking to install sound barrier technology in to a custom casing, then we can help you achieve your goals.

Our sound barrier technology can be removed from its outer protective shell and used in many different environments, such as: riot shields, close protection vehicles or installed as part of bespoke building security installations.

Depending on project scale, we may also be able to manufacture bespoke form factors to precisely suit your use case.

Benefits

- Prebuilt electronics with certification to complement your new product
- A technology partnership that will boost your product's market positioning
- No royalty or license required to use our patented sound barrier technology
